

Abiodun Adeleke | Final-Year Computer Science Student

Location: Manchester/Liverpool

Mobile: +44 7861 673036

Email: Abiodunadeleke@hotmail.co.uk

Personal Statement

Motivated final-year Computer Science student at Manchester Metropolitan University, on track for a First-Class degree and graduating in July 2027. Strong technical foundation in software development, algorithms, data structures and computer systems, with practical experience using Python, Java, C#, SQL, JavaScript and modern web technologies.

Through academic, personal and collaborative projects, I have developed applications spanning full-stack web development, backend systems, databases and cloud-based solutions. These experiences have strengthened my problem-solving, debugging and software development skills, as well as my ability to learn new technologies and work effectively within a team.

I am seeking a graduate technology role where I can apply my technical foundations to real-world problems, continue developing as a software professional and contribute to the design and delivery of reliable, effective technology solutions.

Education

Manchester Metropolitan University, Manchester

BSc (Hons) Computer Science (Expected Graduation: July 2027)

Second Year (25/26): First-Class Average – 74.8%

- Algorithms and Data Structures – 90%
- Networks – 63%
- Industry and Community Engagement – 69%
- Operating Systems – 86%
- Software Development Processes – 62%
- Thematic Project – 70%
- Computer Graphics – 68%

First Year (24/25): First Class Average

Foundation Year (23/24): First Class / 90%+ average

A-Levels: Mathematics (B), Computer Science (B), Physics (C)

GCSEs: 9 including Maths, English and Sciences

Projects & Experience

- Interactive Bible Map - Personal Project (Next.js, TypeScript, Tailwind CSS)

- Developed an interactive web application for exploring biblical places, events and journeys through a map-based interface
 - Built reusable components for map interaction, search, period filtering and timeline navigation
 - Structured datasets connecting locations, historical periods, events and journeys across the application
 - Applied responsive design, debugging and iterative development to improve navigation, zoom behaviour and usability
- Liverpool Sickle Cell & Thalassemia Support Group - Web Support
 - Managed and updated the organisation's WordPress website using Krystal hosting and Softaculous
 - Troubleshoot technical issues involving plugins, website configuration and performance
 - Improved page layouts and accessibility to provide a clearer user experience
- StudentSquare Web Application - Group Project (Python, Flask, HTML, CSS, Firebase)
 - Collaborated within an Agile team to develop a social-matching web application for university students
 - Implemented application functionality including user registration and matching features using Flask with database integration
 - Tested and debugged application behaviour by tracing data through routes and identifying implementation issues
 - Contributed to the presentation of the development process, testing approach and project outcomes
- Hewlett Packard Enterprise Job Simulation - Forage (Java, Spring Boot)
 - Designed and developed a RESTful web service for managing employee data
 - Built a Java Spring Boot backend supporting HTTP requests and JSON-based data exchange
 - Developed and executed unit tests to validate application behaviour and reliability
- Computer Architecture Project - Logisim Evolution & RISC-V Assembly
 - Designed and simulated CPU and ALU components using Logisim Evolution
 - Developed and tested RISC-V assembly programs incorporating control flow, arrays and sorting routines
 - Applied low-level debugging to understand processor behaviour and hardware-software interaction
- Boat Hire Database System - SQL & MySQL

- Designed and normalised a relational database schema using entity-relationship modelling
- Developed SQL queries for structured data retrieval, manipulation and reporting
- Applied database design principles including data integrity, relationships and normalisation

Key Skills

- Programming Languages: Python, Java, C#, SQL, JavaScript, TypeScript
- Web Development: HTML, CSS, Next.js, React, Flask
- Backend & APIs: Spring Boot, REST APIs, JSON, HTTP
- Databases & Cloud: MySQL, Firebase, Google Cloud
- Software Engineering: Object-Oriented Programming, Data Structures & Algorithms, Agile Development, Version Control
- Testing & Debugging: Unit Testing, Functional Testing, Test Case Design, Edge Case Analysis, Debugging, Re-testing and System Verification
- Tools & Technologies: Git, GitHub, Linux, WordPress, Cisco Packet Tracer, Logisim Evolution
- Technical Knowledge: Computer Systems, Networking, Relational Database Design, RISC-V Assembly
- Professional Skills: Problem-Solving, Analytical Thinking, Teamwork, Communication, Leadership, Adaptability and Time Management

Extra-Curricular Activities

- Football - MMU Campus League (2023–Present)
 - Active team member, developing teamwork, communication, discipline and resilience through competitive university football
- British Heart Foundation - Volunteer (2023)
 - Supported day-to-day retail operations while working collaboratively with staff and other volunteers
 - Used retail computer systems, followed workplace procedures and completed assigned responsibilities reliably

Additional Information

Full UK Driving Licence

Hobbies: Sports, Gaming, Fashion & Styling, Music, Content Creation, Technology
